Recipe for Success with Fuchsias

Locate in a **shaded areas** or one that has filtered sun.

They all require frequent watering particularly the hanging plants which need water every day and sometimes twice on hot days!

When planted in the ground, incorporate **Gardner and Bloome Acid Planting Mix** into the soil using 1/3 acid mix to 2/3 native soil.

Fertilize regularly. If you want them to stay gorgeous, mimic our grower who applies a light dilution of fertilizer *each watering*. He uses a growth fertilizer such as **Max Sea Acid Fertilizer** (30-10-10) at ¼ regular strength for 3 consecutive weeks and then switches to a high bloom fertilizer such as **Max Sea Bloom** (6-30-30) at ¼ strength for one week. Continue this regime throughout the growing season and see success!!
